ACUIIEN

THE JOURNAL BY **ACUMEN LIGHT**

WWW.ACUMENLIGHT.COM

The Acumen Mindset

We see lighting as a tool of both design and value. Each space is understood through its function, mood, materials, and architectural intent, allowing light to respond in the right way.

More than a layer added to a project, it becomes part of the spatial experience revealing design, supporting use, guiding movement, and strengthening the identity of the environment.

Light in Service of Design

This journal reflects the way Acumen Light reads a space through atmosphere, function, materiality, and experience.

It brings together projects where the right light reveals design, supports use, and shapes how architecture is perceived.

04	SPECIAL PROJECTS

F&B, COMMERCIAL & RETAIL

Light in these projects is never one-dimensional. In retail, it must attract, reveal, and adapt to changing displays and product stories.

In F&B, it defines mood and builds experience. In commercial, office, and clinic settings, it must understand function first supporting focus, comfort, clarity, and everyday use.

01

VILLA COCONUT

Restaurant & Lounge | DIFC

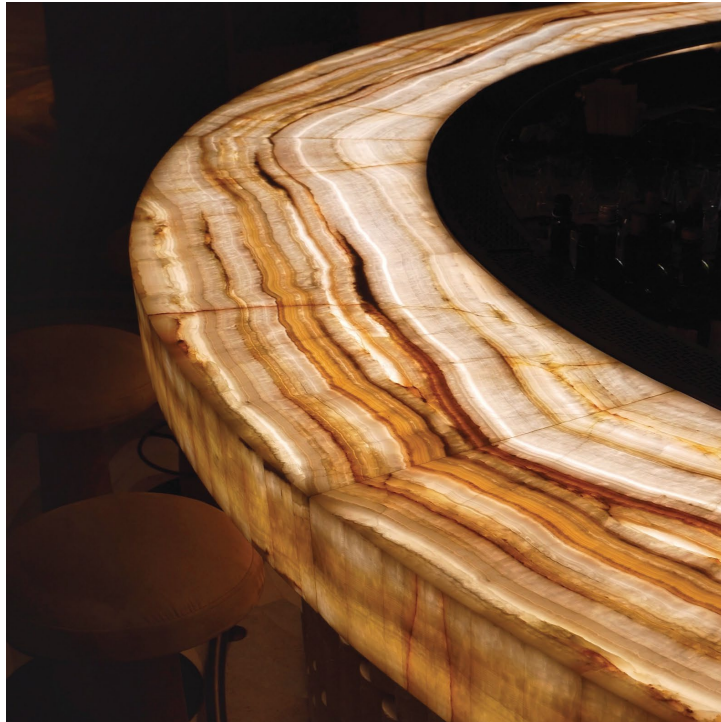

Located in DIFC, Villa Coconut brings together restaurant and lounge experiences within a setting defined by warmth, material richness, and controlled mood.

Here, light gives architectural details and gathering points a stronger sense of presence. For Villa Coconut, the lighting approach centered on atmosphere, material expression, and spatial hierarchy.

Architectural lighting reveals texture with restraint, guides attention, and allows intimacy to remain part of the experience.

The bar doesn't just sit in the space—it becomes the focal line everything revolves around. The stone carries movement in its pattern, while the lighting underneath gives it a quiet lift.

It feels grounded, but never heavy—more like it's meant to draw you in and keep you there.

A space where light turns dining into atmosphere.

The lighting design wraps the space in a continuous, warm glow, tracing the fluid geometry of the ceiling and bar to create a seamless visual flow. Concealed linear lighting defines edges and contours, emphasizing craftsmanship while enhancing the tactile richness of materials.

The layered illumination—integrated within shelving, counters, and architectural surfaces—balances function and atmosphere, transforming the bar into a refined focal point that feels both intimate and sculptural.

The lighting design enhances the intimate dining experience through a careful balance of ambient warmth and focused highlights. Soft, concealed lighting traces the curves of the bar and shelving, creating depth and visual continuity, while accent lighting subtly emphasizes textures and materials.

The result is a layered atmosphere that feels both inviting and refined, where light guides the eye and elevates the spatial experience.

The lighting creates a calm and welcoming atmosphere, using warm tones to enhance the textures and materials within the space.

Soft ambient light and carefully placed fixtures provide a sense of comfort without overpowering the design. The result is a balanced environment where light supports the mood, making the space feel relaxed, intimate, and easy to enjoy.

Easy Ambience

Subtle lighting,
strong atmosphere.

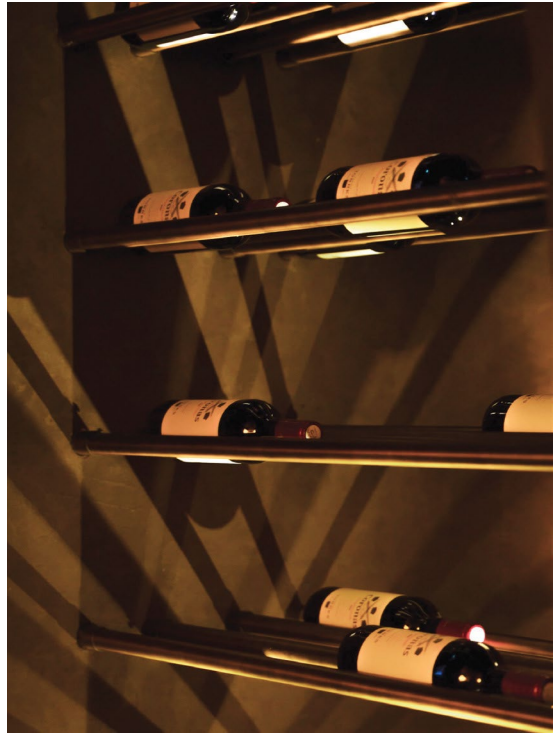

The lighting guides the transition into the space, using soft, warm illumination to define movement and highlight architectural details. Subtle linear lighting at the floor and ceiling edges creates depth and direction, while concealed sources enhance the textures and curves throughout.

The result is a welcoming entry experience where light leads naturally and sets a calm, refined tone.

A gentle transition through light and space.

Where details do the talking.

These moments shift the focus away from the space as a whole and into the details that quietly define it.

It creates a sense of depth without needing complexity, where even the simplest objects feel placed with purpose. There's a calm precision in how everything is arranged—nothing excessive, nothing competing—just a clear understanding of balance and proportion.

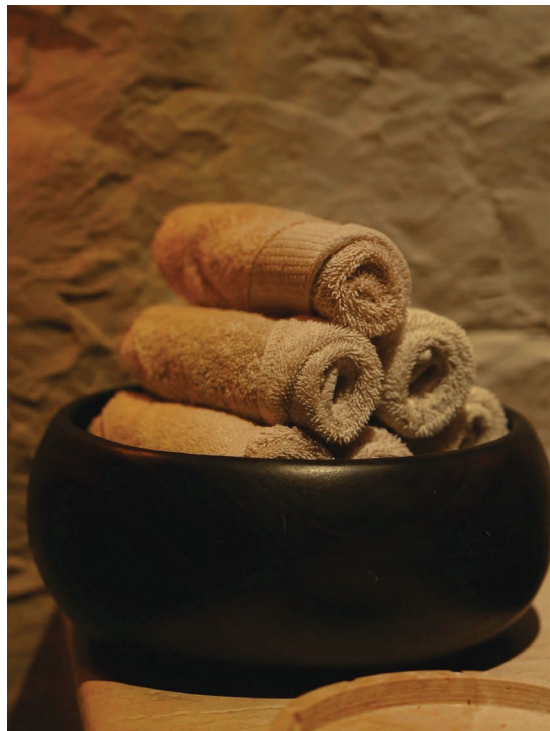

The lighting highlights the finer details of the space, bringing focus to textures, materials, and everyday elements.

Warm, directional light enhances the natural character of stone, water, and fabric, creating a sense of comfort and care. These subtle moments of illumination elevate functional areas, turning them into calm, tactile experiences that feel intentional and refined.

Simple elements, thoughtfully lit.

Light that moves, not just sits.

The lighting doesn't just sit on the architecture—it cuts through it. Vertical lines pull your eye up, while the table stays low, almost quiet, holding the moment together. It feels intentional without trying too hard, somewhere between structure and atmosphere.

MIA RESTAURANT

KUWAIT

At Mia Restaurant, architectural lighting was used to strengthen atmosphere, reveal texture, and give the industrial styled interior a clearer sense of depth and character. Rather than competing with the design, light supports it quietly bringing focus to materials, seating zones, and decorative elements throughout the space.

Acumen studied the design carefully and supplied the architectural lighting in a way that embraced its beauty and enhanced how the restaurant is experienced. The result is a setting where light sharpens identity, supports intimacy, and makes the environment feel more considered as a whole

It's not about perfection here. There's a bit of edge, a bit of contrast, and that's what gives it personality. It breaks away from the softer, more uniform areas and adds a different energy— something more dynamic and less predictable

A cluster of sculptural pendant lights hangs overhead, each piece woven with precision and glowing from within. The layered forms create depth and rhythm, turning functional lighting into a visual focal point. Warm illumination filters through the structure, casting subtle patterns and adding dimension to the space.

The arrangement feels intentional yet effortless, balancing craftsmanship with contemporary design to shape the atmosphere without overpowering it.

Designed to be noticed.

A project where light adds value through restraint.

This space works because it doesn't try too hard. The transition from outside to inside feels natural, with just enough light to show what's going on without fully revealing it. The table sits right in that in-between zone, making it feel relaxed but still connected to the energy inside.

It's simple and well-balanced—nothing feels overdone. The setup is straightforward, but the lighting and layout make it feel considered. It's the kind of place that feels easy to walk into and stay for a while, without needing anything extra

Mia
RESTAURANT

A tightly composed dining setup that plays with symmetry and depth.

The mirrors pull the eye inward, doubling the space and creating a layered visual rhythm, while the exposed wall behind adds a raw, grounded contrast. Soft seating and clean table lines keep it balanced, making the space feel intimate without being closed off.

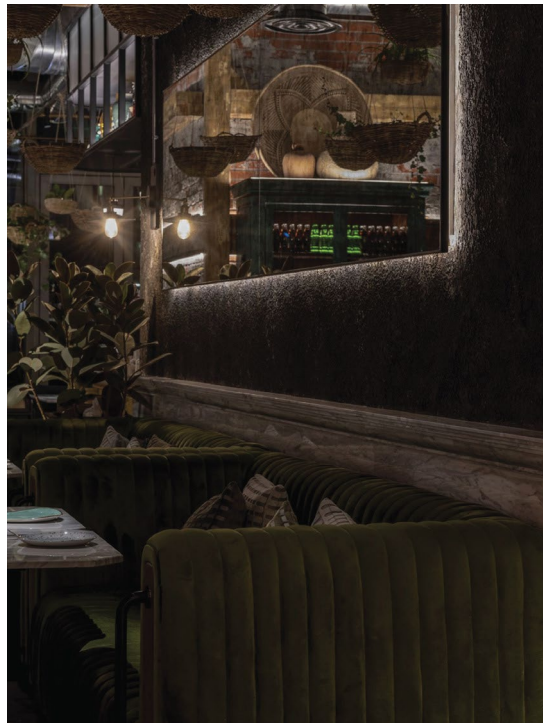

Lighting stays low and focused, highlighting textures and casting subtle patterns that give the entire setting a quiet, deliberate edge.

The space leans into contrast—structured seating against raw surfaces, clean lines softened by layered textures.

Reflections in the mirror extend the room, adding depth without over crowding it, while the lighting stays low and intentional, shaping the atmosphere rather than dominating it. There's a quiet rhythm in how materials and forms repeat, creating a sense of continuity that feels both composed and natural. It's a setting that doesn't try too hard, yet every detail feels placed with purpose.

A layered space where soft seating, textured walls, and subtle lighting come together effortlessly. The design feels grounded and comfortable, with details that quietly stand out without demanding attention.

Low light, high detail.

A more functional side of the space comes through here, where display and utility blend seamlessly. Fresh bread stacked in open shelving adds a sense of immediacy, while the mix of wood, stone, and metal keeps the look grounded and tactile.

JULIENNE & CO

KUWAIT

At Julienne & Co, Acumen Light created a night atmosphere that elevated the entire dining experience through warmth, depth, and restraint. The space relies on light not only for visibility, but for mood shaping how materials, surfaces, and seating moments are perceived after dark.

The layers, warmth, shadows, and depth were all achieved by placing the right light in the right place. The result is a fine-dining environment where minimal design feels richer, calmer, and more luxurious through light.

A table set within its own quiet.

A more intimate corner of the space, where light narrows its focus and everything feels closer, quieter, more deliberate.

A framed moment within the restaurant, where architecture and light align to create a clear sense of arrival. The opening acts as a threshold, drawing the eye inward toward a perfectly composed setting, where symmetry and proportion take the lead. Light is placed with intention, outlining geometry and reinforcing balance without excess.

The circular wall lights introduce rhythm and structure, while the central table remains the quiet focal point.

Framed by light and symmetry.

A closer reading of the same language, where detail becomes the main expression. The space is no longer about the overall composition, but about how light meets surface— how it softens edges, traces textures, and holds onto material without flattening it.

The circular fixtures move from being part of a larger rhythm to standing as precise moments of illumination

They don't just light the wall—they define it, revealing its grain and variation while maintaining a calm, even glow. At the table, light settles gently, keeping the atmosphere consistent while allowing focus to remain effortless.

Detail, quietly elevated.

DILESH

KUWAIT

At Dilesh, Acumen created the atmosphere and evening identity of the space through architectural lighting that works with the design rather than around it. Strip lighting was used to trace the curves of the architectural cladding, giving the walls a stronger visual rhythm and presence after dark.

Task lighting at the dining tables elevates the experience of the space, while the track lighting system within the industrial ceiling adds flexibility to support the diverse functions of the project. Together, these layers allow the environment to feel calm, defined, and adaptable.

Light that isolates the moment

A single point of focus, where everything unnecessary falls away. The lighting isolates the table, creating a clear contrast between what is meant to be seen and what can remain in shadow. It's direct, intentional, and quietly confident.

Nothing competes with the setting—each element is held within a controlled pool of light, allowing texture, color, and composition to stand on their own. The surrounding darkness isn't absence, it's part of the design, sharpening the experience and pulling attention exactly where it needs to be.

In contrast, the greenery introduces a different layer—light becomes directional, more focused, shaping the form of the tree and bringing out its texture. It adds a moment of contrast within the overall calm, where natural elements are highlighted without disrupting the balance of the space.

NAGWA

KSA & KUWAIT

It begins with a sense of calm rather than brightness.

Light settles into the space as a continuous, quiet presence, lifting the ceiling and establishing a soft foundation that everything else builds upon. There is no urgency in how it reveals the room. Instead, it unfolds gradually, allowing geometry to become legible and surfaces to come forward with clarity.

Nothing feels imposed.

Light traces the architecture with restraint, guiding perception without interruption. Materials are revealed through gentle transitions, where tone shifts replace contrast, keeping the atmosphere composed and visually quiet.

It gathers along edges, settles beneath surfaces, and gives weight to the objects it surrounds. The counter reads not just as a form, but as a layered element, softly illuminated from within, allowing depth to emerge through repetition and rhythm. Light filters through openings, creating a subtle pattern that shifts across the surface without ever becoming dominant.

Everything is held in balance. The brightness never peaks, the shadows never compete. Instead, light moves with restraint, reinforcing the materiality and scale of each element while keeping the atmosphere composed and deliberate.

Here, light becomes more tactile.

FLAT 12

Restaurant & Cafe | Dubai

Illumination stays low, intentional, allowing pockets of brightness to emerge rather than flooding the space all at once. Surfaces catch just enough to define themselves, while the rest recedes into a deeper, more atmospheric layer. The result is a rhythm of contrast that feels lived in, not staged.

There is a subtle hierarchy at work. Areas of focus sharpen, then soften again, guiding attention without forcing it. Even the smallest details feel considered, held briefly in light before slipping back into shadow. Nothing is overexposed, nothing is wasted. The space feels intimate, but never closed. This is where lighting becomes mood, not just visibility.

Light sets the mood before anything else has a chance to.

TRESORI CONCEPT STORE

Retail | Dubai

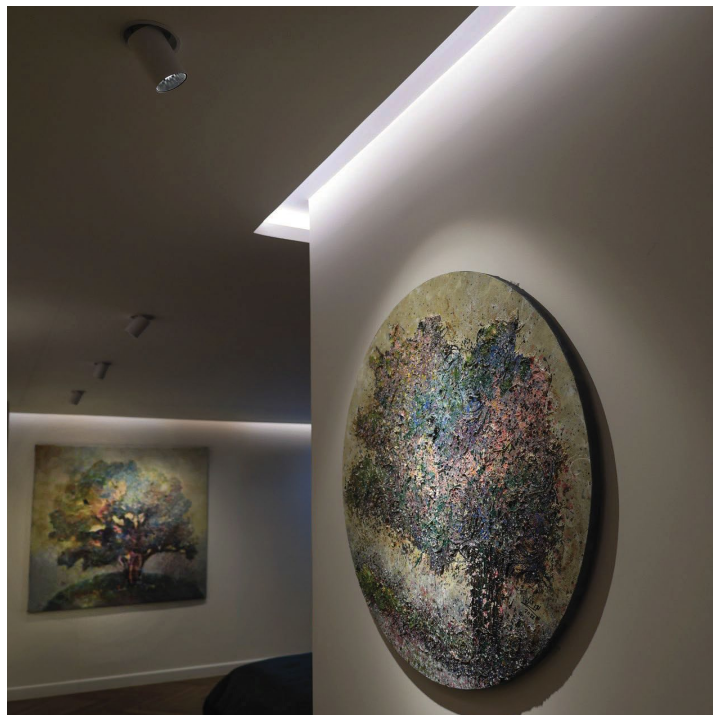

For Tresori Concept Store, we reimagined space through illumination, where lighting becomes the defining element articulating structure, emphasizing scale, and establishing a clear visual hierarchy across the interior.

Each source is strategically positioned to control brightness, shadow, and transition, allowing the space to evolve with movement and shifting perspectives. The interplay between diffuse and focused lighting introduces depth and intensity, transforming the environment into a carefully orchestrated composition.

A quieter expression of detail, where light is used with restraint to define rather than dominate. The shelving is softly articulated, each object revealed with clarity while the overall composition remains calm and controlled. Nothing competes everything is gently held in place.

At Tresori, the scene feels almost composed, as if each element has been paused in a moment of quiet attention.

Light settles gently across the seating and objects, picking up subtle differences in tone ,fabric, and finish. It doesn't separate elements, it gathers them, creating a sense of cohesion between the soft upholstery, the polished surfaces, and the curated pieces placed in between.

There's a domestic quality to it. The kind of light that invites you to sit, to pause, to notice. It supports the intimacy of the setting while quietly reinforcing the identity of the space as both refined and approachable.

Light cuts through the surface, creating a sharp vertical gesture that turns objects into silhouettes and reflections. The glow is intentional and directional, allowing glass and texture to catch and refract light with precision.

Soft illumination wraps around the curved bar, defining its form while keeping the atmosphere calm and continuous. The light sits just beneath the surface, giving the space a gentle glow that feels both seamless and intentional. Materials respond quietly, with edges softened and textures subtly revealed.

Soft edges, clear form.

In this space, light becomes a line rather than a source. It traces the architecture with precision, following every curve and edge as if it were drawn by hand.

The mirror is no longer just a surface, it becomes an illuminated contour, softening the boundary between solid and void. The glow wraps around the opening, giving depth to what could have been a flat gesture, turning it into something almost sculptural.

Below, the materials remain calm and grounded, allowing the light to carry the expression. The result is controlled, minimal, yet quietly expressive, where even the smallest detail feels intentional.

Light isolates the object, turning it into a quiet focal point within the niche, where form and material are gently emphasized without excess. On the table, illumination becomes softer and more diffused, allowing textures to settle naturally while maintaining a warm, intimate tone.

Light that leads, not floods

Each step is gently revealed, not through brightness, but through intention. Small points of light guide movement, while soft pools form on the treads, creating a quiet rhythm as you ascend.

The walls remain still and unexpressive, allowing the light to carry the experience. It becomes less about seeing everything, and more about feeling your way through, where each step is discovered rather than exposed.

In this setting, light becomes a curator. It selects, isolates, and elevates each piece without over whelming the whole. The garments are not simply displayed, they are framed by precise lines of illumination that reveal texture, tone, and form with clarity.

Shadows fall gently behind them, adding depth without distraction, allowing each item to hold itsown presence.

BAYT HAYL

Retail | KSA

Light sets the tone from the outset, guiding attention with clarity and restraint.

It draws you inward, not with brightness, but with precision, revealing surfaces in layers rather than all at once. Every finish is given space to speak, allowing texture, tone, and detail to define the experience.

The environment feels curated rather than filled. Light highlights without overwhelming, creating moments offocus that feel intentional and immersive. Movement through the space becomes part of the story, with each step uncovering something new.

This is retail, shaped by light into something considered and experiential.

Material takes the lead here, and light follows with precision.

Nothing is generalized.

Each surface is approached differently, as if it requires its own language. Stone is grazed, textures are pulled forward, and edges are quietly emphasized without ever flattening the depth. The space feels investigative, almost analytical, where every finish is allowed to reveal itself fully. There is a clear sense of intention behind the restraint.

Light does not overwhelm, it studies. It moves across surfaces slowly, revealing variation, contrast, and detail in a way that feels deliberate rather than decorative.

Hospitality

Where mood softens into welcome.

HOSPITALITY

In hospitality, light does more than illuminate a space, it shapes the experience of being received, settled, and remembered. From the first impression of arrival to the quieter moments of rest and privacy, it helps define the emotional tone of the environment.

02

Across hotels, resorts, and guest spaces, lights
often architecture, strengthens atmosphere,
and becomes part of how comfort, calm, and
memory are felt.

ADDRESS MARINA HOTEL

THE RESTAURANT

DUBAI - UAE

At Address Dubai Marina, Acumen delivered the architectural lighting solutions for the lobby and hospitality spaces, shaping a night identity that feels warm, polished, and inviting. Light was used to define the guest journey across arrival points, dining areas, feature walls, and service zones, giving each moment a clear sense of hierarchy and presence.

Rather than overpowering the architecture, the lighting works with it , softening tall volumes, framing decorative elements, and bringing greater calm to the public experience after dark. The result is a hospitality setting where welcome is felt through depth, balance, and the right light in the right place.

This moment reads like a threshold where light becomes a gesture of welcome rather than mere illumination. The composition is carefully staged to introduce the identity of the space with quiet confidence. Instead of overwhelming the visitor, it guides attention through a sequence of soft highlights, allowing the brand, object, and architecture to reveal themselves gradually

A soft hierarchy of light defines the moment

The scheme is built on layered restraint. A soft, recessed downlight establishes a low ambient baseline, carefully controlled to avoid flattening the space.

Within this field, the niche becomes the focal point through integrated, concealed accent lighting, likely a warm, narrow beam source positioned to graze and center the object simultaneously.

A rhythm of vertical glow defines depth and atmosphere.

The space is conceived as a balance between openness and intimacy, where light plays a critical role in softening the scale of a tall, expansive volume.

Rather than uniformly illuminating the room, the strategy introduces vertical anchors of warmth, creating a series of intimate pockets within a larger architectural frame. The result is a dining environment that feels both spacious and personal.

LIGHT FRAMING

Materiality plays into this restraint, the matte wall surfaces absorb light, while the polished stone subtly reflects it, enhancing brightness without additional fixtures. The composition relies on precision rather than intensity, where light defines geometry, edges, and hierarchy with quiet confidence.

Light anchors intimacy against an open view.

Wall mounted fixtures introduce vertical pools of light, framing the central axis and reinforcing the geometry of the space. Their soft, diffused glow adds warmth to the textured surfaces, while avoiding harsh shadows.

At table level, illumination remains subtle and controlled, ensuring functionality without competing with the overall composition.

FRAMED CONTRAST

RADISSON BLU HOTEL

Abu Dhabi, UAE

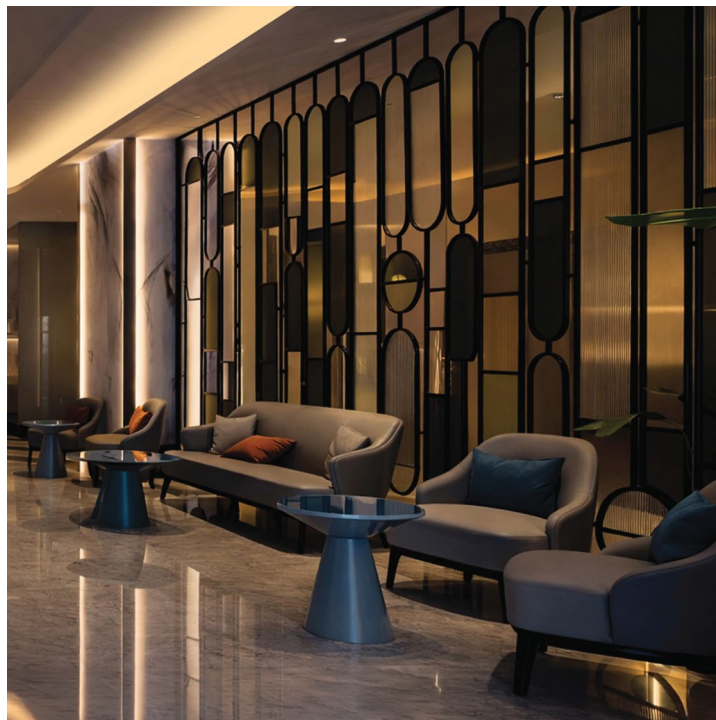

Across Radisson Blu, light is used to define geometry and guide movement, tracing edges, framing volumes, and softening transitions between zones. Integrated linear lighting and concealed sources establish a continuous architectural language, while carefully placed accents introduce moments of focus and intimacy.

A consistent warm color temperature anchors the experience, balancing the coolness of exterior views and reflective materials. This contrast enhances spatial depth, particularly in the evening, when the interior lighting becomes the dominant narrative.

A dialogue of light and reflection
defines the space.

Materiality is central to the effect. The polished stone floor reflects the lighting strategy almost as a secondary canvas, extending the vertical lines and amplifying the sense of continuity. Soft seating areas are intentionally kept in lower light levels, allowing them to feel intimate within the larger, more luminous envelope.

This setting is defined by intimacy and framing, where light is used to compress the scale of the space into a more personal, enclosed experience. The central candle introduces a human, almost tactile source of light, soft, flickering, and immediate contrasting with the controlled architectural lighting beyond.

Warm intimacy

Ambient light shapes
comfort and continuity.

Linear flow

A continuous cove light runs along the ceiling, establishing a soft ambient layer that defines the overall volume without introducing glare.

This is reinforced by integrated lighting at the base of the counter, creating a parallel line that grounds the composition and enhances the perception of depth. Together, these horizontal elements create a clear visual axis, giving the space a sense of direction and flow.

SHERATON HOTEL

Abu Dhabi, UAE

The lighting strategy at the Sheraton Hotel is conceived as an evolving sequence of moments, shaping how guests move, gather, and unwind within the space. Rather than emphasizing scale alone, the design creates a layered environment where openness and intimacy coexist. Larger volumes feel structured and grounded, while smaller settings invite comfort and ease.

Illumination enhances the spatial reading, giving form and proportion greater presence while subtly directing flow. In more private settings, a gentler expression of light creates a sense of retreat, allowing the atmosphere to slow and settle.

Movement defined by subtle illumination

At the human level, illumination is intentionally restrained, furniture clusters are defined through subtle ambient spill rather than direct spotlighting, allowing the space to feel relaxed and cohesive.

The staircase and circulation zones are quietly emphasized through layered light, ensuring clarity without visual interruption

SOFITEL HOTEL

Dubai – UAE

SOFITEL

At Sofitel Hotel, lighting was used to shape how the environment is understood, bringing focus to key elements while maintaining balance across larger volumes. The space moves between openness and detail, allowing each moment to feel intentional and composed.

Through carefully integrated lighting, feature walls, ceiling elements, and vertical surfaces are revealed with precision. The approach introduces contrast and depth, helping the architecture read more clearly without adding excess

Lighting across the lobby is orchestrated to emphasize spatial continuity and movement. Curved ceiling coves emit a soft, uninterrupted glow that mirrors the architecture, creating a fluid visual rhythm throughout the space. Rather than relying on direct illumination, the strategy layers indirect light to maintain a calm, cohesive atmosphere.

Reflections on the polished floor amplify this effect, extending the perception of light and reinforcing the openness of the volume.

Flow and function defined through light

This overhead illumination acts as both a functional light source and an architectural statement, drawing the eye upward and reinforcing the vertical scale of the space. The warm glow contrasts gently with the cooler exterior light beyond the glazing, creating a layered visual experience that connects interior intimacy with the outside environment.

The result is a controlled yet expressive ceiling that defines the atmosphere through rhythm, repetition, and refined illumination.

Light structured in rhythm above.

RESIDENTIAL

In residential spaces, light becomes deeply intimate. It supports the rhythms of daily life, from quiet mornings to relaxed evenings, shaping comfort in ways that feel natural and effortless. At home, lighting must do more than define form.

03

It needs to create warmth, soften transitions, reveal materials, and adapt to the way people actually live. Across villas, private residences, and outdoor living spaces, light brings balance between function and feeling, turning architecture into a place that feels intimate, grounded, and lived in.

PRIVATE VILLA

residential Spaces | Dubai

The entrance unfolds with a quiet sense of arrival, where the olive tree stands as a natural focal point, welcoming and grounded.

Light is placed with intention, not only to reveal but to transform. The shadows of the olive leaves gently play across the stone cladding, softening its presence and adding a sense of movement to the still surface. Below, the water captures it all. Reflections of light, architecture, and landscape come together, extending the experience and giving the entrance a deeper, more immersive presence.

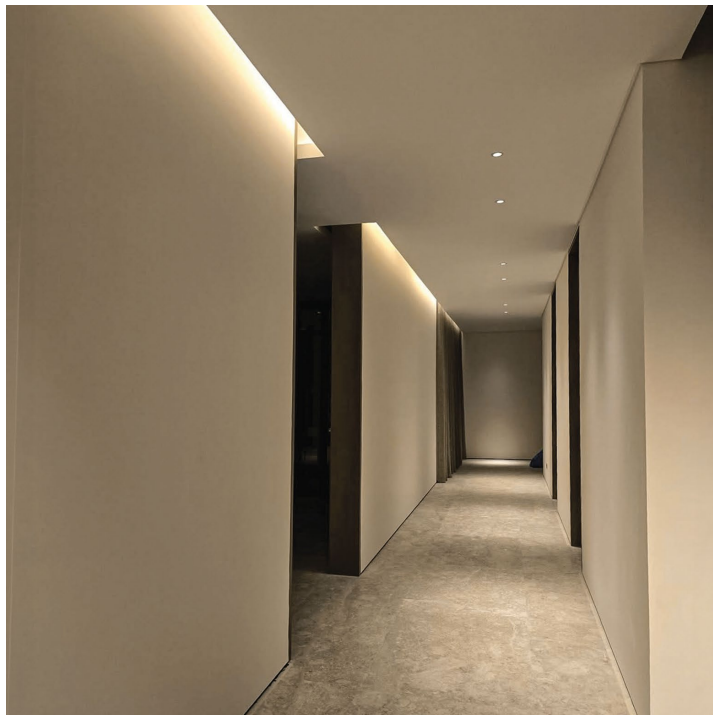

A welcome shaped by light and nature

Where light turns a house into a feeling.

Residential spaces are shaped by comfort, warmth, and simplicity. Light plays a key role in defining mood, enhancing materials, and creating a sense of ease turning everyday spaces into places that feel natural and lived in.

The image shows a sophisticated interior design. A large, abstract artwork with bold black and white geometric shapes is mounted on a wall of horizontal wood slats. The room is dimly lit, with a small recessed light on the ceiling and light coming from the artwork itself. In the foreground, a light-colored modular sofa with several cushions is visible. The overall atmosphere is modern and elegant.

PRIVATE VILLA

Residential Spaces | Dubai

Within this private Dubai residence, created for Ghaith Marwan and Sara Al Waraa, lighting is thoughtfully integrated to enhance both flow and spatial experience. Linear elements guide movement, while softer ambient layers establish a calm and composed atmosphere.

Subtle variations in brightness define transitions between spaces, allowing the interior to unfold gradually. Integrated lighting within architectural features reinforces depth and continuity, creating a seamless visual rhythm throughout.

Interior glow, extended outward.

Warm vertical washes trace the architecture, giving the façade a calm, sculptural presence while emphasizing its materiality and form.

Inside, soft ambient layers glow through the glazing, visually extending the interior outward and dissolving the boundary between inside and out. In contrast, the cool illumination of the water introduces movement and depth, reflecting light back onto the surfaces and enriching the overall composition.

Accent lighting is used sparingly but effectively: sculptural fixtures and decorative pieces are highlighted just enough to create focal points without overpowering the scene.

The balance between direct and indirect illumination ensures that no single source dominates; instead, light is diffused, layered, and cohesive.

Overall, the scheme prioritizes comfort and visual continuity where light doesn't just reveal the space, but quietly shapes the experience of it.

This staircase lighting is a precise study in layered, integrated illumination where the light source is completely concealed and the effect feels almost architectural rather than decorative.

Each tread is underlit with a continuous warm linear strip, creating a floating effect where the steps appear to hover.

The light is directed downward and slightly forward, ensuring both safety and visual softness there are no harsh points, only a consistent glow that defines the rhythm of the ascent.

Reflections add a quiet sense of depth.

The accent lighting brings the artwork to life, revealing the richness of its colors and the subtle depth of its textures. What feels muted at first becomes vibrant and layered, with every tone gently lifted into focus.

The light doesn't compete with the piece, it simply uncovers its true character.

The right light lets the artwork speak in its full palette.

Precision, dressed as calm.

The light doesn't announce itself, it traces. A fine perimeter that quietly separates surface from depth, turning stone into something almost weightless. The mirror floats, the vanity hovers, and the architecture begins to feel less constructed, more composed.

There's a discipline to how the illumination is held at the edges. It never floods the room; it defines it. Every line is deliberate, every glow contained, allowing the richness of the material to stay in control.

The marble veining becomes a landscape, not a backdrop. This is where luxury shifts from excess to edit.

Where light isn't layered on top, but embedded into the logic of the space itself.

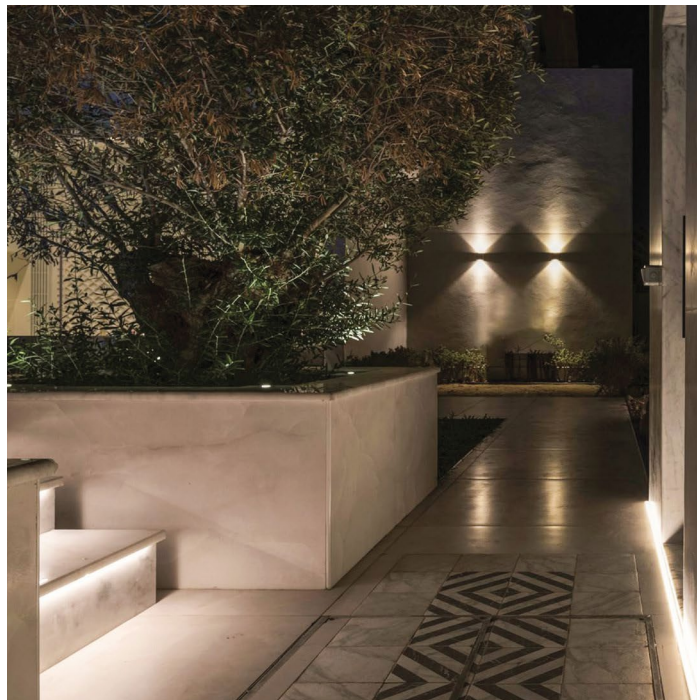

PRIVATE MANSION

Residential Spaces | Kuwait

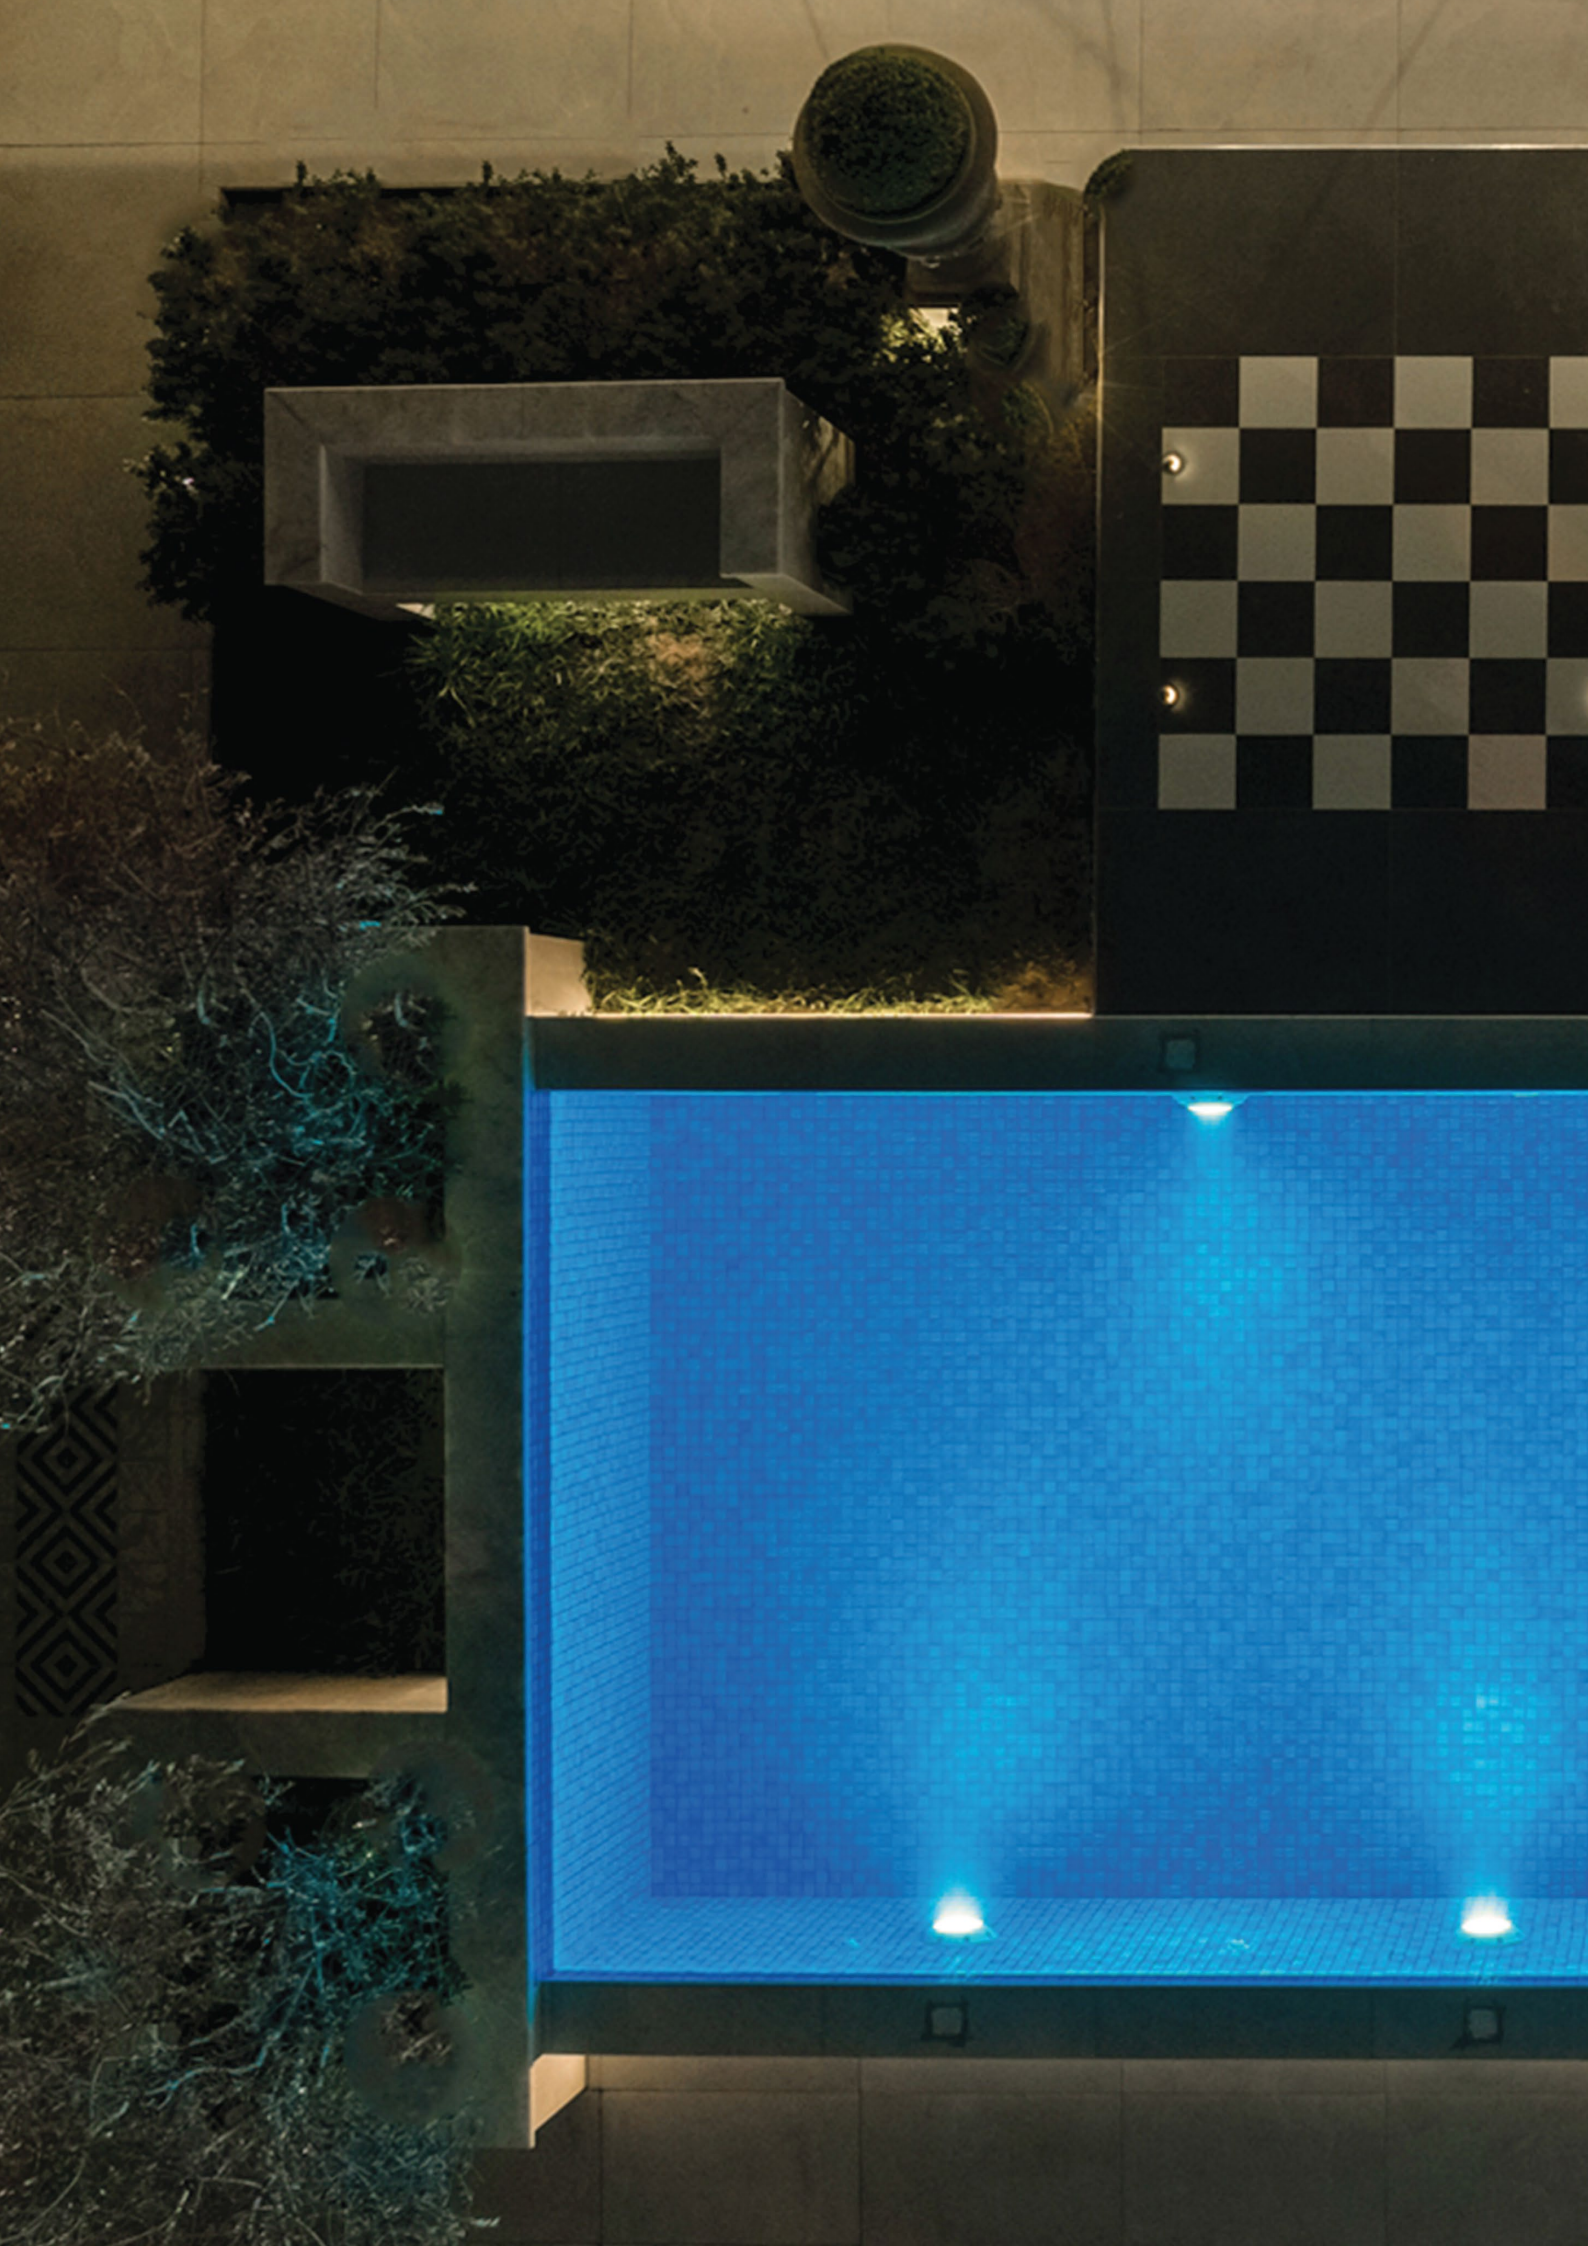

Warm illumination reveals texture and depth, while maintaining a calm and controlled atmosphere. The design remains restrained, allowing the architecture to express itself with precision. Light becomes part of the composition, guiding movement, reinforcing symmetry, and connecting the built form with its surroundings. The result is a space that feels balanced, intentional, and timeless.

A living space defined by controlled light, symmetry, and detail.

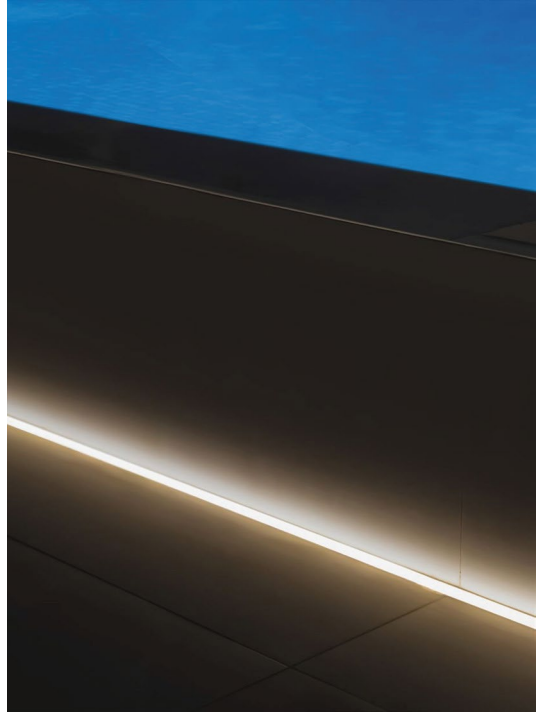

Where function meets a quiet sense of beauty.

Subtle linear lighting softly traces the edges of each surface, creating a seamless flow between steps, walls, and the surrounding space.

It enhances movement by gently guiding the eye, while maintaining a calm and understated presence.

The contrast between the warm glow and the cooler tones of the water adds depth and balance, making the space feel both refined and inviting.

Calm lighting for effortless movement.

Soft, integrated lighting enhances the architectural details while adding depth and warmth to the space. The gentle glow highlights textures, from smooth stone to natural elements, creating a balanced contrast between light and shadow.

It brings a sense of calm sophistication, where classic forms are subtly elevated through modern illumination.

Where shadows and
highlights create balance.

Soft, layered lighting highlights the intricate detailing of the gate while adding depth to the surrounding architecture.

The warm glow enhances the richness of the materials, creating a strong yet inviting presence. It transforms the entrance into a statement, both elegant and welcoming.

A grand entrance, softly lit.

PRIVATE VILLA

Residential Spaces | Abu Dhabi

Soft, layered lighting highlights the intricate detailing of the gate while adding depth to the surrounding architecture. The warm glow enhances the richness of the materials, creating a strong yet inviting presence.

It transforms the entrance into a statement, both elegant and welcoming.

Subtle glow, refined living.

In this bedroom, lighting is used to create a calm, layered atmosphere, softly highlighting textures and surfaces across the room.

In direct ceiling light sets a gentle base, while concealed lighting within the wardrobe adds depth and clarity without drawing attention to itself.

The warm tones enhance the material palette, making the space feel cohesive and inviting. Each layer of light works quietly in the background, bringing balance and comfort while maintaining a clean, understated look.

Lighting in this space is designed to feel effortless, supporting both function and atmosphere without drawing attention to itself. Focused track lights define key working areas, while concealed linear lighting adds a soft, continuous glow across the backsplash and surfaces.

This layered approach keeps the space visually clean while ensuring clarity where it's needed most.

The facade is defined by a restrained and balanced lighting approach that enhances its clean geometry without over whelming it.

Soft, warm light washes across the surfaces, highlighting the horizontal lines and framing the large openings with subtle clarity. Vertical elements are gently accented, adding height and structure while maintaining a calm visual rhythm. The contrast between the warm illumination and the cool evening backdrop gives the architecture a composed and inviting presence. Light is used sparingly and with intention, allowing the materials and proportions to remain the focus.

The result is a facade that feels refined, grounded, and quietly expressive.

UNDERWATER LIGHTING

Lighting is seamlessly integrated with in the water features, with linear sources concealed inside the spouts to keep the design clean and uninterrupted. As the water flows, the light gently highlights its movement and texture, drawing attention without overpowering the overall composition.

The warm glow contrasts with the cooler tones of the pool, adding depth and subtle dynamism. As the water cascades, shifting reflections and highlights bring a quiet sense of motion, enhancing the atmosphere while maintaining a refined, balanced look.

Villa Exterior façade

Light changes the way the residence is read after dark. It catches the height of the columns, slips across the arches, and brings a softer edge to the strong architectural lines. Instead of making the façade feel overly lit, the lighting gives it rhythm and character, allowing the building to feel present from every angle.

The effect is composed and deliberate, giving the residence a strong presence without making it feel overstated.

A modern, two-story private villa at night. The villa features a prominent cantilevered upper floor with a glass railing, illuminated from within. The ground floor has large glass windows and doors, also lit up. In the foreground, a large, rectangular swimming pool with a tiled bottom is illuminated with blue lights. The sky is dark with some stars visible.

PRIVATE VILLA

Residential Spaces | Abu Dhabi

The architecture reveals itself quietly after sunset. Not through intensity, but through layers of light that trace its proportions with calm precision. Edges are lifted, volumes are softened, and the structure begins to float rather than sit.

The upper frame glows gently, holding the composition together, while the interior light spills outward just enough to suggest life within.

There is a quiet dialogue between light and structure here, one that unfolds across layers rather than moments. The architecture stretches horizontally, and the lighting follows, extending lines, reinforcing depth, and allowing the volumes to read with clarity from every angle.

Vertical washes give weight to the columns, while concealed light within the frames softens their edges, creating a balance between strength and lightness. Nothing feels overlit, instead, each surface receives just enough to be understood.

The landscape and water complete the composition. Reflections blur the boundary between built and natural, while the illuminated trees introduce a softer rhythm against the precision of the structure. Together, everything settles into a composed night time presence that feels both grounded and expansive.

Where reflections soften the scene

PRIVATE VILLA

Residential Spaces | Kuwait

This space is shaped by a quieter kind of light, one that settles rather than announces itself. It moves gently across surfaces, creating depth through layers instead of contrast.

The connection to the outdoors becomes central. Through expansive glazing, the landscape is carefully illuminated, allowing trees and foliage to read as part of the interior composition. The result feels immersive, where the boundary between inside and outside softens into a continuous experience.

PRIVATE VILLA

Residential Spaces | KSA

Here, light makes a decision, what to hold, what to let dissolve. It tightens around form, carving out presence while allowing the rest of the room to recede into a quieter register. This is where lighting becomes authorship. A controlled imbalance that makes the space more compelling than symmetry ever could.

Structure, revealed by restraint.

Light traces the grid without over powering it, slipping between planes and edges as if it belongs there rather than being applied. The geometry holds its discipline, but the illumination softens its authority, turning rigidity into rhythm.

What stands out is the precision of control. Nothing spills, nothing competes. The light understands boundaries, and because of that, the architecture feels intentional down to its smallest intersection. This is structure, not just built, but articulated.

Repetition, refined into something quieter. The glow is clean, almost architectural in its discipline. It does not decorate the mirrors, it defines them.

There is a subtle elegance in the restraint. Nothing overreaches, nothing disrupts the cadence. The materials hold their richness, but the light decides the tone. This is repetition with intention. A quiet system that turns reflection into structure.

A photograph of a modern private villa at night. The building features clean, geometric lines and is illuminated with warm, golden light. Large windows and glass doors reveal the interior, which includes a chandelier. The foreground shows a paved courtyard with low-lying plants and a small tree. The sky is dark with visible stars.

PRIVATE VILLA

Residential Spaces | KSA

Light does not try to fill the room.
It defines its limits.

A quiet line at the ceiling sets the perimeter, letting the height exist without exaggeration. The glow stays measured, never spilling too far, never competing with what is already there.

What follows is a shift in focus. Surfaces begin to take over. Stone, fabric, and detail emerge with a kind of quiet clarity, each one given just enough presence to register without dominating. Even the central piece above feels filtered, broken into smaller moments of light rather than a single gesture.

Volume, held in balance.

Everything aligns, but nothing feels rigid.

There is a quiet precision in how the illumination is held. It frames, it guides, it repeats just enough to create rhythm without becoming predictable. Even the suspended elements feel less like fixtures and more like extensions of that line, breaking light into fragments that echo downward. The space feels intentional at every point, but never forced. Movement is implied, not directed. Balance is achieved without symmetry becoming static.

This is alignment as atmosphere.

PRIVATE VILLA

Residential Spaces | UAE

A calm dialogue between inside and out.

This villa unfolds through a sense of quiet refinement, where light plays a defining role in how each surface is perceived. The façade is not simply illuminated but carefully revealed, with soft washes tracing textures and emphasizing the depth of the cladding.

At the center, the sculpted tree becomes a focal point, gently lit to anchor the composition. Its presence is mirrored across the still water, where reflections extend the architecture and introduce a sense of calm continuity.

The pathway reflects just enough light to feel grounded, while the glazing holds a softer interior presence behind it. There is no competition between inside and out, only a gentle layering that keeps the experience calm and coherent.

The water introduces a second dimension, doubling the scene and softening it at the same time. Light touches the surface lightly, enough to register reflections without flattening them. The result feels composed but not rigid, where movement, texture, and illumination come together in a way that feels effortless.

PRIVATE RESIDENTIAL

Residential Spaces | Dubai

The space is shaped through calm, controlled light.

It frames the architecture gently, outlining volumes without harsh contrast and allowing the room to feel cohesive and grounded. Light sits within the surfaces rather than on top of them, creating a soft glow that enhances material warmth and continuity. There is a quiet rhythm between focal points and ambient layers.

The central composition is defined with clarity, while the surrounding light softens transitions and extends the atmosphere across the space.

Nothing competes, everything supports.

The experience begins
with a moment
of focus.

Light draws a clear boundary, framing the space with precision and inviting a closer look. It does not reveal everything at once, but instead creates a controlled introduction, where reflection, depth, and material quietly unfold.

There is an intentional balance between presence and restraint. Light defines edges, softens transitions, and guides the eye without distraction. The result feels immersive yet calm, allowing the space to communicate through clarity rather than excess.

PRIVATE VILLA

Residential Spaces | Abu Dhabi

A private residence defined by a sculpted composition, where light is used to articulate form and bring clarity to each material after dark. The architecture relies on contrast, and the lighting follows that same logic, separating volumes while keeping the overall expression calm and cohesive.

The approach to the entrance is subtle and intentional. Low level lighting traces the steps and landscape edges, guiding movement naturally while highlighting key elements like the planted tree, which anchors the arrival without becoming a focal distraction.

Light shaping texture at a human scale

In this interior, the atmosphere is built through precision and intimacy, where light is scaled down to engage directly with materials and objects.

The vertical timber panels are not just a backdrop but an active surface, with each pendant casting a focused beam that creates a rhythm of light and shadow across the wood. The spacing feels deliberate, allowing the composition to read clearly without becoming repetitive.

This setting is defined by layering, where levels, water, and architecture are brought together through a carefully measured use of light. Each step, platform, and edge is softly revealed, allowing the composition to unfold gradually rather than all at once.

The overall atmosphere feels composed and inviting, where light is used to organize space, soften transitions, and bring a sense of continuity across different elements.

Light guiding every level.

Continuing through the space, the language of light becomes more intimate and curated. The planted enclosure shifts from background to presence, softly revealed from below so it reads as a contained landscape rather than a decorative layer. The illumination is restrained, allowing the greenery to exist quietly within the composition without disrupting the overall calm.

Across these scenes, the strategy remains disciplined. Light is reduced to what is essential, with each source carrying a clear purpose. Materials, objects, and transitions are allowed to emerge gradually, resulting in a seamless continuation where atmosphere is built through clarity, balance, and restraint.

Quiet focus, stronger presence

SPECIAL PORJECTS

In special projects, light is approached with a higher level of intention shaped to respond to distinct ideas, environments, and design ambitions. Each solution is carefully developed, allowing illumination to align closely with the concept and character of the space.

Across these projects, light moves beyond a supporting role.

04

It defines key moments, reinforces identity, and contributes to experiences that are more focused, expressive, and memorable.

Al Diwan

Landmarks | Kuwait

At Massilah Mosque, light establishes how the space is understood, reinforcing clarity, proportion, and order. It supports both movement and stillness, creating a continuous and composed environment.

Illumination follows the structure, defining arches, columns, and openings with precision. Transitions remain soft, allowing the space to be experienced gradually. Material and texture are revealed with restraint, while low-level lighting defines paths and edges. The composition remains controlled, avoiding excess.

In prayer areas, light is balanced and even, supporting focus and calm. The result is a disciplined and quiet spatial experience.

Where light brings clarity to moments of reflection.

Light doesn't just reveal the space here, it edits it.

Each arch becomes a quiet stage, carved out not by structure but by illumination.

The glow traces the geometry with precision, soft enough to feel ambient, deliberate enough to feel authored. What could have been repetition turns into rhythm: four moments, subtly different, each holding a living form that feels almost incidental, like the architecture is the real subject, and everything else is just passing through.

Lighting here goes beyond visibility, it shapes the entire experience of the space. It draws attention to moments that matter, from the intricacy of the dome to the quiet depth of the entry, creating a sense of occasion as you move through it.

The way light settles, highlights, and gently fades across surfaces gives the architecture a presence that feels both grand and intimate at the same time. It's not just about illumination, but about emotion. Light brings a sense of calm, reverence, and subtle drama, transforming the space into something memorable.

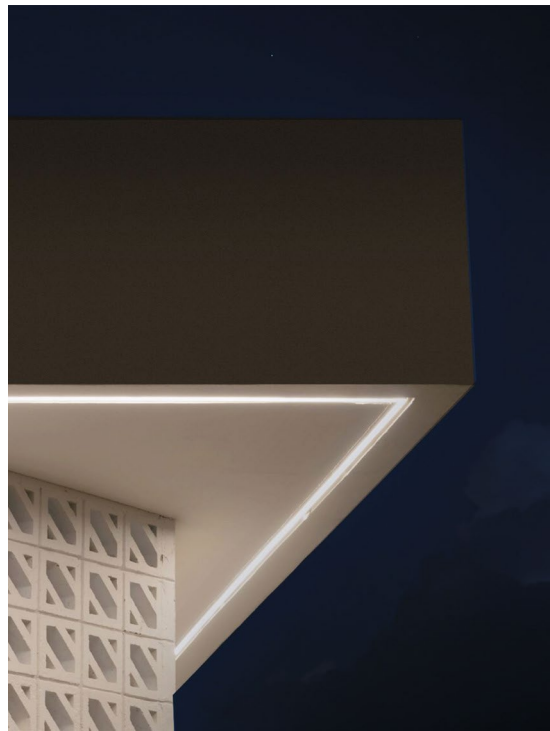

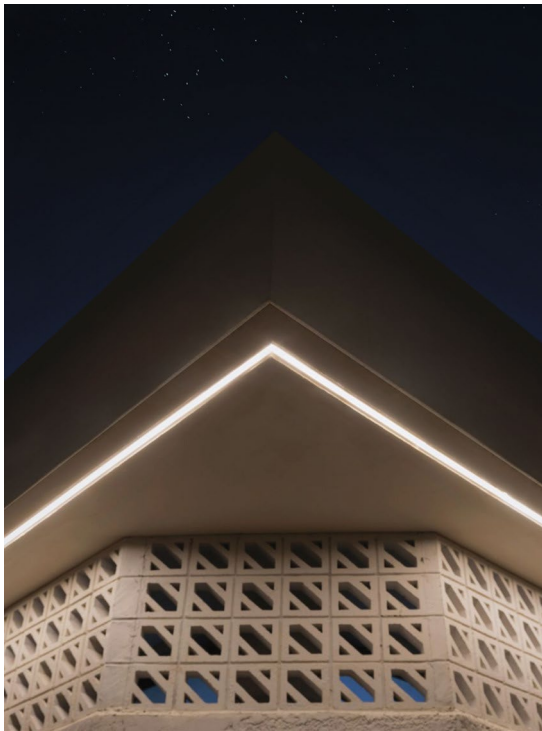

It defines how the architecture is seen, but more importantly, how it is felt.

Light becomes the defining detail here, not as a feature, but as a presence. It runs along the edges with precision, giving the architecture a crisp clarity that only reveals itself after dark. The structure feels sharper, more intentional, almost re-drawn by light.

There's a quiet confidence in how it's used. Nothing excessive, nothing forced, just enough to highlight the form and let the geometry stand out.

It transforms the space subtly.

turning simple lines into something striking, where the architecture feels composed, complete, and effortlessly elevated.

**Here, light becomes reverent.
It doesn't compete with the ornament, it completes it.**

A quiet ring of illumination lifts the dome from weight into suspension, allowing centuries of pattern, symmetry, and craft to breathe again. The gold doesn't shout; it hums. Every tessera, every line, every intersection is coaxed forward, not by brightness, but by balance.

This is illumination as restoration of intent. Not rewriting history, but reminding it how to glow.

Acumen bollards are placed low and with intention, allowing light to weave through the planting rather than sit above it. Their presence is subtle, almost disappearing, while their effect is felt in the way each blade is revealed.

The illumination remains soft and controlled, capturing movement, texture, and depth without exposing the source. As the grasses shift, the light responds, creating a gentle shimmer that contrasts the stillness of the architecture beyond.

Light hidden within the landscape

MASJID SHUHDA AL WATAN

Religious Spaces | Ajman

Vertical elements are subtly emphasized, while surrounding illumination remains gentle, supporting a sense of stillness. Light becomes an essential part of the experience, shaping an atmosphere that feels both grounded and reflective.

The lighting strategy emphasizes clarity, restraint, and continuity, which are fundamental in religious spaces. Light is used to shape perception, guide movement, and subtly mark areas of significance while maintaining visual calm. By reducing contrast and glare, the design creates a balanced environment that supports focus, presence, and contemplation.

Soft, controlled illumination enhances stillness and reinforces the spiritual character of the space.

MOHAMMED BIN RASHID SPACE CENTRE

Landmarks | UAE

The vision of Space Centre is to push beyond horizons and connect the UAE to space. Acumen Light translated that vision into light.

مركز محمد بن راشد
للفضاء
MOHAMMED BIN RASHID SPACE CENTRE

مركز التحكم بالمهام
MISSION CONTROL CENTRE

THE NIGHT IDENTITY

In collaboration with Tridonic, advanced control technology ensures precision and performance Through a smart RGB system.

The façade can embody the UAE flag, represent global partnerships, and national occasions.

مركز محمد بن راشد
فضاء
MOHAMMED BIN RASHID SPACE CENTRE

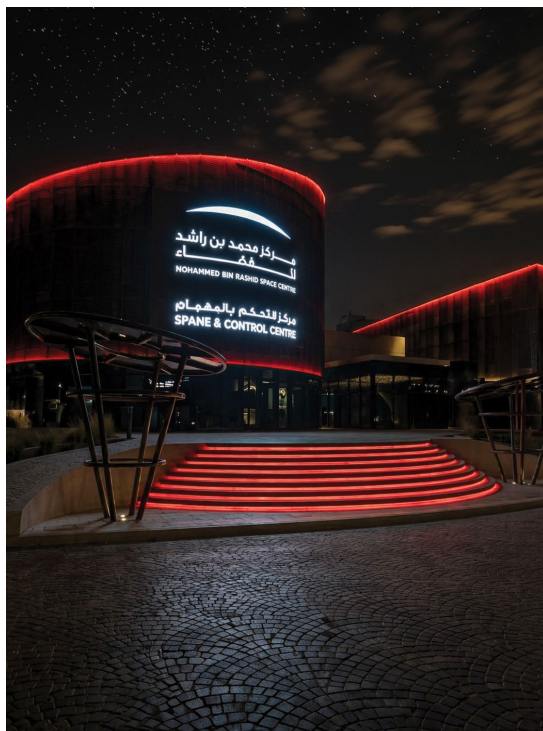

مركز التحكم بالمهام
MISSION CONTROL CENTRE

The expression shifts with purpose.

Color becomes a language, translating identity into light. Through a responsive RGB system, the façade adapts, reflecting moments, marking occasions, and reinforcing presence. The building no longer holds a single image. It evolves, responding in real time while maintaining precision and control.

Movement is extended into the ground plane. Illuminated steps guide arrival, creating a clear and continuous transition between exterior and entry. Light defines each layer, from façade to landscape, connecting the experience into one cohesive sequence.

Color transforms the façade into
a responsive identity.

مركز محمد بن راشد
للفضاء
MOHAMMED BIN RASHID SPACE CENTRE

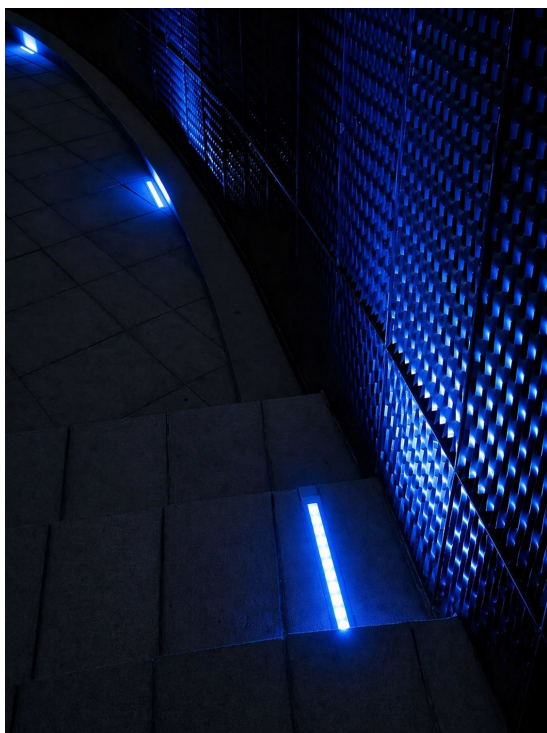

A seamless transition shaped by light.

Light extends into the ground plane, translating identity into movement. Each step is defined with precision, creating a guided approach that feels both intuitive and deliberate. The illumination is not over powering, but controlled, allowing the architecture to lead while light reinforces direction and clarity.

Beyond the illuminated façade, the lighting design extends into the landscape Pathway lighting, guiding movement with clarity and subtle elegance. RGB up lights introduce dynamic colored identity.

This transition space becomes part of the experience. From distance to arrival, light connects every layer, ensuring continuity between the building's expression and its surroundings. What begins as a visual statement evolves into a physical journey.

The Story Continues, Beyond the Façade

The image shows a sophisticated interior design. On the left, a curved glass wall reflects the interior and exterior. A large potted tree stands near the glass. In the center, a curved sofa is positioned against a wall with vertical wooden slats and warm lighting. In the foreground, a low, curved coffee table holds a small plant. The floor is a light-colored material with a circular patterned rug.

OBJECT 1 DEVELOPMENT SPACE

Commercial Spaces | UAE

The vision of Object One is defined by refinement and clarity in every detail.

We translated this vision into a controlled lighting language, where warmth and precision work in balance. In direct illumination softens the space, while integrated highlight reveal material depth and texture with intention. Wood surfaces are gently washed, creating a consistent rhythm that anchors the interior.

This vision is carried through a restrained lighting approach, where light settles gently across surfaces rather than defining them sharply. A continuous glow traces the perimeter, lifting the walls and creating a sense of calm enclosure. Subtle gradients replace contrast, revealing textures with softness and precision.

Object 1 is experienced through atmosphere, where light quietly defines how the space is understood.

It settles into the architecture, tracing lines, softening edges, and giving depth to materials without overpowering them. Wood feels richer, textures become more present, and each element is revealed with clarity and intention.

Warmth and precision in balance.

Light settles into the space with quiet precision, shaping the architecture without drawing attention to itself. There's a calm order to it all. The space feels resolved, where every line, surface, and shadow aligns into something refined and effortless.

A central volume anchors the space, while light draws the eye upward, expanding the room beyond its physical limits.

The circular ceiling glow introduces a sense of openness, almost like a void filled with soft illumination. Below, subtle uplighting grounds the column and surrounding greenery, creating a quiet contrast between weight and lightness.

Light that expands the space upward.

It's a composition built on stillness.
Nothing competes, nothing interrupts, just
a continuous, calm presence shaped by light.

A quieter expression takes over.

Light doesn't guide, it settles. It wraps around materials, revealing softness in every curve and surface.

Glass dissolves boundaries, allowing layers of the space to overlap and interact. The glow is restrained, almost atmospheric, creating depth without drawing attention to itself.

ACUMEN LIGHT
EXPERIENCE HOUSE

A Walk Through Light, Layers, and Living Experiences

At the Experience House, lighting is not presented as a technical detail. It is experienced as a design language. Every corner is created to show how the right light, in the right place, can transform a space, reveal its materials, support its function, and give it a stronger identity.

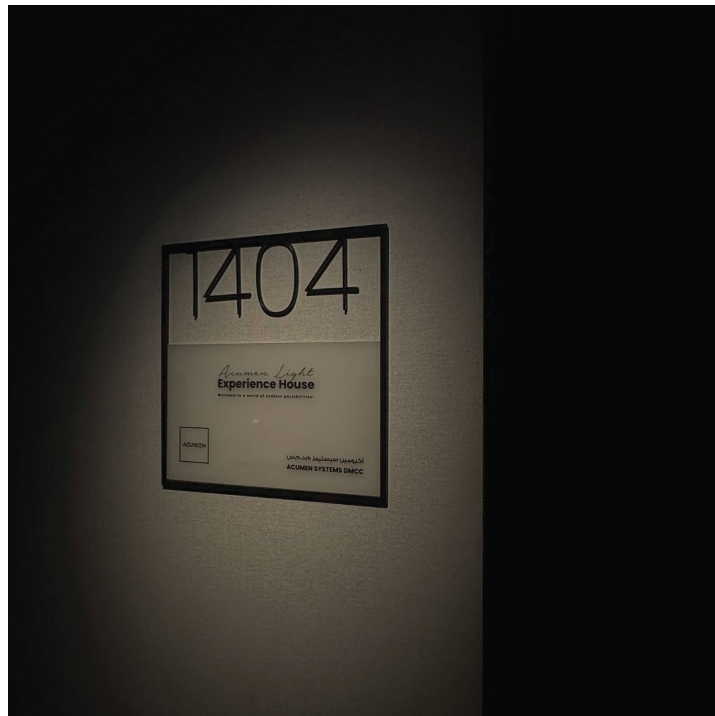

The house is designed as a journey through different lighting scenarios: living, working, dining, cooking, displaying, welcoming, and relaxing.

Each space demonstrates how lighting layers, control systems, and fixture selection can add value not only to the interior, but also to the way people feel and interact with the space.

Acumen Experience House

Signage Lighting: The First Impression of a Brand

Signage lighting is an essential part of any commercial space because it often creates the first impression. The signage must be compatible with the lighting of the store or interior.

Its color temperature, brightness, visual comfort, and quality should all support the brand identity.

Poor signage lighting can weaken the image of the brand, while good signage lighting strengthens recognition and creates a more professional impression. A sign is not just a name. It is part of the first experience.

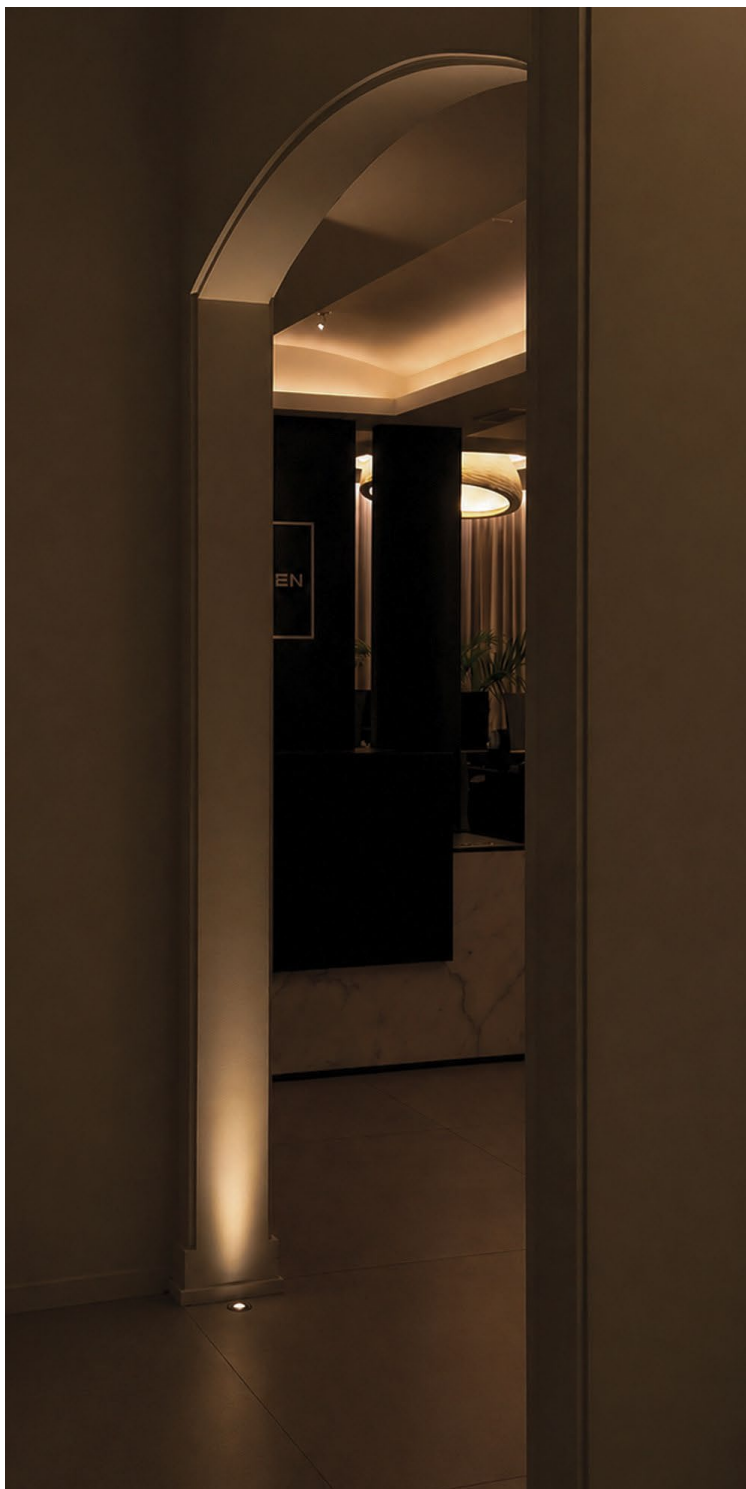

Welcome Light: The Transition Experience

Some areas are not main rooms, but they still matter. Transitional spaces, entrances, and passage areas shape the way people move from one experience to another.

In the Experience House, a simple transition area was enhanced with comfortable anti-glare lighting. Without light, it could have been ignored. With the right lighting, it became a welcoming moment.

This kind of lighting prepares the visitor emotionally. It marks the shift from one space to another and adds value to areas that are often overlooked.

The living room is one of the strongest examples of how multiple lighting layers can work together inside one space. Here, the experience combines **ambient lighting, accent lighting, and task lighting.**

Cove lighting creates a soft and balanced general glow, while accent lights highlight the artwork, the planter, and selected decorative elements.

The chimney area is enhanced with two up lights, giving it more presence and turning it into a visual feature within the room.

The shelves are also softly illuminated to add comfort and value to the objects displayed on them.

On the center tables, a combination of accent and task lighting adds both beauty and function.

The result is a living room that does not depend on one source of light. Instead, every layer has a role.

Together, they create atmosphere, depth, comfort, and visual richness.

Light as Identity

In one area, an artwork was placed on a wall in almost the same color as the wall itself. Without light, the detail almost disappears. Once the accent light is turned on, the artwork becomes visible and the wall gain's identity.

This shows how lighting can reveal what already exists. Even when the décor is minimal or very simple, light can create contrast, character, and a stronger visual experience.

Sometimes, the design does not need more objects. It only needs the right light to bring it to life.

The shelves inside the Experience House were used to show that there is not only one correct way to light a display area. Shelves can be lit from the side, from the bottom upward, or from the top downward. Sometimes, a visible line of light adds character to the design. Other times, the best result comes from hiding the light source completely for a cleaner and softer effect. The choice always depends on the space, the materials, and the mood we want to create.

The important point is not only where the light comes from, but what it reveals and how it supports the objects being displayed

Shelves: Different Ways to Reveal Display Areas

The Dome: Giving Value to a Simple Architectural Element

One of the moments inside Acumen Experience House focuses on the dome, a simple architectural element that gains much more presence through light. Without lighting, the dome can easily pass unnoticed. But once it is treated with the right lighting, it becomes part of the experience. The light reveals its shape, adds depth, and turns it into a soft transition moment within the space.

In the corridor, the approach was different. Since the space is narrow, around five meters long, and does not include a strong decorative focal point, the lighting was used to create one.

As Acumen always aims to do, the ceiling was kept clean. Instead of filling it with downlights, step lights were used to reveal the texture of the wooden flooring.

This transformed the floor into the main visual element of the corridor. A simple passage became a designed moment, proving that even a small area can gain identity when lighting is placed with purpose.

In bathrooms and washrooms, the most important lighting element is the light around the mirror. The face should be properly lit, especially in spaces used for grooming, shaving, or applying makeup. For that reason, mirror lighting must be directed toward the face in a comfortable and practical way.

But functional lighting alone is not enough. The bathroom can still have atmosphere and design value. In the Experience House, mirror lighting is combined with accent lighting on the artwork, the edges of the washbasin, and selected decorative elements such as a flower vase. One focused downlight supports the wash area without overwhelming the space. The result is a bathroom that is practical, comfortable, and visually refined.

Lighting That Helps Products Speak

A small retail-inspired section was created to show the difference between lighting a space for living and lighting a space for selling.

In a living space, lighting is usually softer and more emotional. In a retail space, the product needs to stand out clearly. The lighting must help the piece speak for itself. That is why retail lighting often requires higher lumen output, stronger focus, the right color temperature, and sometimes tunable white, depending on the product and the experience required. In this setting, lighting is not only decorative. It becomes part of the sales strategy. It improves visibility, enhances the product, and helps the customer see the item in its best condition.

Kitchen: Task Lighting as the Priority In the kitchen, lighting must first support function. Since the kitchen is a working space used for cooking, preparing food, and making coffee, task lighting becomes the most important layer.

The countertop and preparation areas need clear, comfortable, and shadow-free illumination.

Meeting Room / Dining Concept:

One Fixture, Multiple Effects The meeting room at Acumen Experience House can also be understood as a dining room concept. In this space, one oval downlight was used to achieve a result that might normally require several standard downlights. This shows how the right fixture can reduce visual clutter while still delivering the needed lighting effect. Because the room is used for meetings, 4000K was introduced.

It was carefully combined with 3000K to maintain balance and comfort. Mixing color temperatures is not wrong when it is studied properly. In fact, it can add richness to the space when each tone supports the function and mood of the area.

Hidden Artwork:

When Light Reveals What the Eye Cannot See In one area of Acumen Experience House, the artwork was created in the exact same color as the wall.

Without lighting, it almost disappears into the background, becoming barely visible to the eye. But once the accent light is turned on, the artwork is revealed.

The light creates contrast, depth, and shadow, allowing the piece to appear and giving the wall a completely new identity.

This moment shows that lighting does not only illuminate objects that are already visible. It can also reveal hidden details, create visual surprise, and transform a very simple wall into a designed feature.

Even when the décor is minimal or almost invisible, the right light can make it stand out and bring the space to life.

One of the strongest messages in the Experience House is that lighting can give importance to even the simplest object. With the right accent light, a basic piece can become dramatic, cinematic, and visually powerful.

The light gives the object presence, creates depth around it, and allows it to become part of the atmosphere. This is why accent lighting is not only about brightness. It is about focus, emotion, and storytelling.

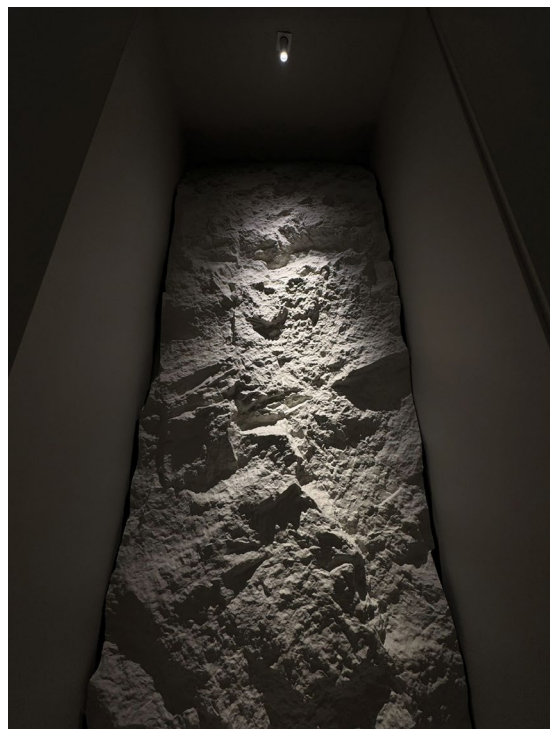

Creating a Night Identity

The outdoor and facade lighting experience shows how architecture can gain a completely different identity at night.

Whether the design is modern or classic, facade lighting should not only provide visibility. It should reveal the architecture, highlight its rhythm, and create presence after sunset. This is especially important in residential projects, where the exterior of the house becomes part of its personality. The right outdoor lighting can transform a home from a visible building into a memorable night scene.

Acumen Experience House is built to show that lighting is not an accessory added at the end of a project. It is part of the design process itself. It can highlight architecture, reveal materials, support daily functions, improve retail presentation, strengthen brand identity, and create emotional transitions between spaces.

From the living room to the kitchen, from the bathroom to the facade, from artwork to signage, every example proves the same idea: When lighting is studied, every space gains more value.

Shadow-free illumination

THE MINDS BEHIND THE SPACES

Every project carries the vision of the people who shaped it. This section celebrates the architects, designers, lighting designers, consultants, contractors, and technical partners whose work gave each space its identity.

Alongside their vision, Acumen Light contributed through lighting solutions that helped reveal, support, and complete the final experience.

Founder Fedaa Zaatar

Project: **Acumen Experience House**

At the Acumen Experience House, Founder Fedaa Zaatar brought his passion for light and design into a living experience.

More than a showroom it's a real-life experience, he designed the space to show how the right light can shape mood, function, comfort, and the way a home comes to life.

V. Concept Design Studio

Project: **Object 1 Development**

V. Concept Design Studio shaped the interior design vision of Object 1 Development with a strong sense of materiality, balance, and visual identity. Their work created a refined interior scene where every element contributes to the overall atmosphere.

Acumen Light supported the project through technical and decorative lighting selected to complete and elevate the design language.

Ezzat Baroudi / EB Lighting Design Studio

Projects: **Dilesh Café & Restaurant, Private Villas**

Ezzat Baroudi brought his lighting design expertise to Dilesh Café & Restaurant and several private villas. His work focused on creating atmosphere, comfort, and a clear visual hierarchy within each space.

Acumen Light supported his lighting direction with fixtures and solutions that helped translate the design concept into a finished experience.

Mouhajer International Design

Projects: **Sofitel, Address Marina, Sheraton, Radisson Blu**

Mouhajer International Design shaped the interiors of several hospitality projects, including Sofitel, Address Marina, Sheraton, and Radisson Blu. Their work created elegant environments designed around comfort, arrival, and the guest experience.

Acumen Light supported these interiors with lighting that enhances the mood, highlights the design details, and completes the hospitality atmosphere.

**DAL Studio / Dalal Alsharhan**

Projects: **MIA, Julianne & Co, Najwa KSA & Kuwait, and many other master Projects**

DAL Studio, led by Dalal Alsharhan, brought a refined lighting design vision to several F&B and hospitality projects, including MIA, Julianne & Co, Najwa, and other Kuwait-based spaces. Their work gave each project its own mood, rhythm, and visual experience.

Acumen Light supported these lighting concepts through selected products and technical solutions that helped bring the design direction into reality.

**Alchemy Architecture Studio & MFARES & Associates**

Project: **Villa Coconut DIFC**

The Architecture team contributed to the design language of Villa Coconut DIFC, bringing a refined and memorable character to the space. Their work helped translate the venue's coastal-inspired identity into a Dubai hospitality setting.

Acumen Light worked within this vision to highlight the textures, curves, and details that give the restaurant its atmosphere.

Design Center Architects & Engineers Consultants.

Project: **MBR Space Centre**

Design Center Architects & Engineers Consultants shaped the façade of the MBR Space Centre, giving the building a strong architectural presence connected to science, progress, and national ambition. Their façade design became the face of a landmark project with a clear identity and purpose.

Acumen Light worked on the façade and landscape lighting to highlight this architectural presence after dark.

Tridonic

Project: **MBR Space Centre**

Tridonic supported the MBR Space Centre project through the technical systems behind the façade and landscape lighting. Their contribution helped provide the power, control, and reliability needed for a lighting solution connected to such an important national project. With their technical support, Acumen Light was able to bring the building's night identity to life with precision and confidence.

TRIDONIC

Al Ashram Contracting

Project: **Flat 12**

Al Ashram Contracting contributed to Flat 12 through the execution and contracting stage of the project. Their work helped turn the design into a finished built environment with attention to site coordination and final delivery.

Acumen Light supported the completed space with lighting that adds function, comfort, and visual harmony

TLT Studio / TLT Concepts

Project: **Villa Coconut DIFC**

TLT Studio, the in-house architecture and design team of TLT Concepts, helped bring the Villa Coconut concept into its final spatial experience. Their work shaped a venue that balances relaxed luxury, social energy, and memorable design moments.

Acumen Light supported this experience with lighting that carries the space beautifully from daytime dining into its evening mood.
